## **REPORT ON VISIT TO PRIMARY HEALTH CENTRE PETH VADGAON**

Women's college of Pharmacy has visited to Primary Health Centre, Peth Vadgaon for D Pharm student on 8 Dec. 2023 with Ms. A. B. Kumbhar & S. M. Koli. This is an opportunity for students to get the real experience in a better way and correlated with the textbook learning. Hospital staff welcomes the students and staff. Visit was conducted under the guidance of their teaching staff. Doctor explained all department & services of primary health centre

The main aim of this visit was to have an insight on primary health or medical facilities provided by government & various scheme for poor class of society

Visit was very important and all students asked questions to hospital staff to know various aspects and procedure carried out in hospital. We had discussion on how the system works and we really look forward to visiting such places again. This visit gives experiences to the students to help them face real life challenges and we committed to arrange such visits for the development of the students.

## REPORT ON WATER TREATMENT PLANT VISIT

Womens college of Pharmacy students has visited water treatment plant on 08<sup>th</sup> Dec. 2023 With Mr. Kumbhar & Miss Snehal Koli. Staff from water purification unit welcomes the students and staff. Then they explain entire process about water purification like location from which water is collected various processes to be done on water for purification.

The major source of drinking water is tank, from where water is pumped to the filtration Plant.

### Treatment process:

In treatment process water is mixed with bleaching powder and Alum to kill the pathogens Coagulate particle. During coagulation, chemical with positive charge added to water. Positive charge will neutralize negative charge and dissolve particle in water.

After coagulation process flocculation process is done. In flocculation gentle mixing of water to form larger and heavier particle are formed. In sedimentation process, solid particles are removed from water because of their heavy mass and

gravitational force acting on them. Once floccules have settled to bottom of the water, the clear water is on top, is filtered to separate additional solid from water. During filtration, the clear water is passes through filter that have different pore size and are made of different material (sand, gravel & charcoal). This filter remove dissolved particles, dust, parasites, viruses and bacteria. Activated carbon filters also removed bad odor.

After filtration of water, disinfectant Bleaching powder, Chloramines are mixed with water to kill any bacteria or viruses. Disinfectant level should keep low to avoid any problem to mankind. Water is stored in big reservoir to supply it to society

Water purification plant Provides clean and reusable water, Protect environment, and Prevents people from water-borne diseases. During this visit, students understood entire treatment process and the importance of water and the distribution system.

Our staff thanked their staff for cooperation. All students and staff returned to college at 3.00 PM.
